Experience

Full Stack Web Development Intern, *Expertmind Technologies LLP – Bilaspur, India* *May 2025– July 2025*

- Built and deployed scalable Ecommerce full-stack web applications using React and Spring Boot, integrating RESTful APIs and MongoDB, which streamlined client consultancy workflows and enhanced service delivery efficiency.

Web Development Lead & Core Member, *PLECOS (EdTech Startup) – Bengaluru, India* *Aug 2025- Oct 2025*

- Leading the development of PLECOS, an EdTech platform, by building scalable full-stack applications with Next.js, Node.js, and DynamoDB to streamline workflows and improve user learning experiences.

Projects

OutreachOS - AI-Powered Outbound Automation Platform | **Link** *Next.js, TypeScript, PostgreSQL, Redis, BullMQ, Prisma, Gemini AI, WhatsApp (Baileys), Gmail API*

- Built a full-stack outbound platform managing **email & WhatsApp campaigns at scale -** CSV lead uploads, AI-personalized copy via **Google Gemini**, and multi-sender mailbox management from a unified dashboard.
- Architected a **multi-service background worker** using **BullMQ + Redis** for async campaign sends, inbox warmup, mailbox sync & reply tracking - all without blocking the main app.
- Built a **Python scraper microservice** with Playwright automation to auto-enrich leads from websites, secured with **NextAuth (Google OAuth)** and encrypted SMTP credential storage.

LinkManagement- SEO Workflow & Link Building Platform | **Link** *React, Node.js, Express, PostgreSQL, Redis, Socket.io,*

- Architected a production platform serving **60K+ active bloggers** with **6-tier RBAC** (Admin → Blogger), enforcing strict data isolation and role-specific analytics dashboards.
- Engineered an **11-stage workflow state machine** automating SEO link-building pipelines (draft → approval → publish), with **Cheerio.js** auto-crawling live URLs to validate backlinks and block fraudulent submissions.
- Built a **digital wallet & financial reconciliation system** using strict PostgreSQL transactions for contractor payouts, secured APIs with JWT + Helmet + Rate Limiting, deployed via **Cloudflare Tunnels**.

KuberFashion -E-Commerce Platform | **Link** *React, Java 21, Spring Boot, PostgreSQL, Redis, Kafka, Docker, GCP, ELK Stack, OAuth2*

- Built a production-ready full-stack e-commerce platform using **React** (frontend) & **Java 21 + Spring Boot** (backend) covering product catalogs, carts, order workflows & admin portal, fully **Dockerized** and live on **Google Cloud VPS**.
- Crafted a custom auth pipeline with **Spring Security, JWT & OAuth2**; wired **Redis** for caching hot endpoints and **Kafka** for async order event processing - keeping the system fast under real traffic.
- Integrated **Cloudflare R2** (zero egress fees) for media delivery, **ELK Stack** for centralized logging & observability, and **Flyway** for stress-free DB migrations across environments.

Technologies

Programming Languages: Java, Python, JavaScript, TypeScript, C, SQL

Full-Stack Development: React, Next.js, Spring Boot, Node.js, Express.js, Spring Security, Three.js, Framer Motion, Socket.io-client, REST APIs, Web Scraping (Cheerio, BeautifulSoup, Playwright)

Databases: PostgreSQL, MongoDB, DynamoDB, MySQL, Redis

DevOps & Cloud: Docker, GCP, Vercel, Cloudflare (R2, Tunnels), CI/CD, Microservices, Flyway

Message Queues & Streaming: Apache Kafka, BullMQ, Socket.io

Security & Auth: JWT, OAuth2, Spring Security, NextAuth, Bcrypt, Helmet

AI & Integrations: Google Gemini, Gmail API, WhatsApp (Baileys), Zoho Mail API, AWS S3 SDK

Monitoring & Logging: ELK Stack (Elasticsearch, Logstash, Kibana)

Problem-Solving: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)

Tools: Git, Docker, Postman, Swagger/OpenAPI, VS Code, Jupyter Notebook, Maven

Achievements

- Built 15+ **production-grade projects** (LinkManagement.net, KuberFashion, OutreachOS, Rakshak) spanning AI, FinTech, E-Commerce, and Disaster Management - deployed and actively serving real users.
- Serving as **Placement Cell Lead** and **CSE Tech Team Lead at Techfest 2025** - coordinating industry drives, mentoring peers, and organizing large-scale technical events.
- Built a strong foundation in **OOPs, DBMS, OS, and Computer Networks**, solved **200+ LeetCode problems**, and consistently applied these concepts across real-world system design, backend architecture, and production-grade projects.

Education

B.Tech in Computer Science & engineering School of Studies of Engineering and Technology – GGU(Central University)
Bilaspur, India *oct 2023 – May 2027*
